

Questions:

Date: 10/14/2022

Time: 09.00 – 09.30

Location: Fontys R10

Participants: Marielle Fransen, Aya Shikh Suliman, Alaa Bolbol, Erfan Alizada, Alexander Petrov

- 1- During the presentation, you said that our design looks good. We only have to make the combo box of choosing between animals and employees bigger! Do you have other feedback that you want to give us on the design?
- 2- What do you think of the idea of having administration that manages, and scheduler who makes the schedules?
- 3- Administration can search, add, edit, promote, and remove employees. Would you like to have another feature for managing employees?
- 4- And what about animals? Administration can also search, add, delete, edit, and find the location of animals!
- 5- We have a feature that we didn't show in the presentation because it is not implemented yet. It's the report feature! Our idea is that each day, all employees should write a small report about the situation of the animal. This way the employee after him/her is going to know if something special happened. For example, if an animal got sick or something else. What do you think of this idea?
- 6- About the database! What do you want to store in your database!
- 7- What do you expect from us to have done in week 9?
